All (BRAND NAME) boilers benefit from a 50-year record of innovative features and outstanding performance. There is something extra that's included in our popularly-priced, single-tube versions, however. It concerns space, or more exactly, less floor space. Their compact, upright design makes them easier to place in a room while also reducing the expense allotted for an installation area.

That's just part of the many reasons why these boilers are ideal for so many applications—dry cleaning and laundry establishments, dairies, wineries, food processing, sterilization, and plating.

A major feature unique to all of the (BRAND NAME) boilers is the proven *Insta-Therm* system. This allows for an integrated return tank system that is built into the boiler itself to provide a more efficient pre-heating operation. It will generate a full head of steam in less than 15 minutes from a cold start.

Further convenience and efficiency come from factory-mounting, plumbing and wiring the boiler feed pump along with other components and controls. A typical installation is quick, easy, and without the complications of an on-site assembly. Additionally, you never need buy (or provide space for) a separate return tank attachment.

Maintenance expense is lowered by the simplified design and construction, typified by the use of stainless steel for the cold water makeup tanks. If needed an entire water tube assembly is easily replaced in as little as four hours with no special tools or skill requirements.

## Why Choose (BRAND NAME)?

Buying a boiler is an investment. Your decision should be carefully based on a thorough comparison of critical factors: from reliability and performance to its convenience and costs.

There is more than a half-century of expertise in the design and construction of every boiler we produce.

Features such as *Insta-Therm* that provides more effective pre-heating and the use of electronic pilot systems with high-efficiency burners contribute to a greater fuel savings.

A smaller installation area makes it easier to locate a boiler and produces savings in the cost of floor space. These all result from a more compact size that is due to integrating the return tank within the boiler itself throughout our entire line.

There's yet another convenience in our all-in-one design: Every boiler is delivered complete, ready to install.

Finally, note the cost value in a low initial purchase price, ongoing minimal maintenance expense, plus protection from a complete warranty program.

Add up these advantages and you'll see that (BRAND NAME) offers the most. Whether your operation should become suddenly down and you have need for an emergency replacement, or if you're planning for a future need, we can help in choosing the right boiler for the job!
